**PAJARO VALLEY WATER MANAGEMENT AGENCY
PROPOSED FINAL BUDGET
FISCAL YEAR 2024-2025**

Introduction

Seawater intrusion in the Pajaro Valley Subbasin, 3-002.01 (Basin) was first documented in 1953. Throughout much of the Pajaro Valley Groundwater Basin long-term groundwater overdraft conditions have resulted in groundwater levels declining below sea level seasonally. In the coastal area this creates a landward pressure gradient that causes seawater to flow in to, and contaminate, freshwater aquifers. Seawater intrusion has elevated the concentration of chloride and other salts in groundwater up to three miles inland from the coastline, and in some areas contaminating the groundwater to the point that it is unsuitable for use without treatment.

The Pajaro Valley Water Management Agency (PV Water or Agency) is a state-chartered water management district formed in 1984 to manage groundwater resources and supplemental water supplies within the Pajaro Valley. In 2014, the Sustainable Groundwater Management Act (SGMA) became law, establishing a new legal structure in California that provides local agencies the means to manage groundwater basins in a manner that will be sustainable. Water Code section 10723(c)(1)(L) establishes PV Water as the exclusive local agency within its statutory boundaries with authority to comply with the requirements of SGMA. In 2015 the Board of Directors (Board) voted to become the Groundwater Sustainability Agency (GSA) for the Basin.

SGMA defines sustainable groundwater management as the “management and use of groundwater in a manner that can be maintained during the planning and implementation horizon without causing undesirable results.” SGMA defines undesirable results as any of the following:

- Chronic lowering of groundwater levels indicating a significant and unreasonable depletion of supply
- Significant and unreasonable reduction of groundwater storage
- Significant and unreasonable seawater intrusion
- Significant and unreasonable degraded water quality
- Significant and unreasonable land subsidence
- Surface water depletions that have significant and unreasonable adverse impacts on the beneficial uses of surface water

SGMA requires critically-overdrafted, high and medium priority basins to be managed under a Groundwater Sustainability Plan (GSP) or an approved alternative by January 31, 2020, and to achieve sustainability by 2040. The Department of Water Resources (DWR) Bulletin 118 – 2003 Update identifies 515 groundwater basins in the state: 43 are high priority and 84 are medium priority. DWR has designated the Basin critically-overdrafted and high priority.

PV Water developed its first Basin Management Plan (BMP) in the early 1990s. The plan provided a roadmap to stop groundwater overdraft and halt seawater intrusion. PV Water has updated the BMP several times. In April 2014 the Board adopted Resolution 2014-05 adopting the 2014 BMP Update. The Ad Hoc BMP Committee, which met between 2010 and 2014, evaluated 44 potential projects to achieve sustainable groundwater resources, and provided a recommendation of approval to the Board. Implementation of the projects and programs identified in the 2014 BMP Update formally commenced on July 1, 2015, when new Proposition 218 compliant rates supporting the 2014 BMP Update implementation went into effect. In January 2017, the Board approved an agreement for Basin Management Plan Implementation – Program Management Services. The agreement funded a team of engineers, environmental scientists, and other experts, to advance work on the supplemental water facilities described in the capital projects section of the narrative. This work led to the preparation and certification of the College Lake Integrated Resources Management Project Final Environmental Impact Report (EIR), and project approval in October 2019. It also led to the certification of the Watsonville Slough System Managed Aquifer Recharge & Recovery Project Final EIR and project approval in January 2021.

During 2020 and 2021, the Ad Hoc Sustainable Groundwater Planning Advisory Committee provided input and guidance to staff on the BMP: Groundwater Sustainability Update 2022, which the Board adopted in November 2021 via Resolution 2021-17, "Adopting the Basin Management Plan: Groundwater Sustainability Update 2022 and Authorizing the General Manager or Designee to Submit the Basin Management Plan: Groundwater Sustainability Update 2022 to the California Department of Water Resources". PV Water staff submitted GSU22 to DWR to satisfy the SGMA requirement of providing a periodic update of the state of the Basin and implementation of projects and management actions.

The Fiscal Year 2024-2025 (FY24-25) budget allocates funding for PV Water to continue implementation of Board approved projects and management actions in order to fulfill its mission to achieve sustainable groundwater resources for the Pajaro Valley. The budget serves as a projection of PV Water finances.

Budget Organization

The budget is organized by the following service expense groups:

- General Fund Agency Administration
- Special Fund General Administration
- Facility Operations
- Basin Management
- Capital Projects
- Debt Service Funds

Presented below is a summary of projected activities, budget assumptions, highlights by service, and a detailed budget for each of the service expense groups. A list of staff positions, salaries, benefits, and time commitment by service is included for each service group.

Revenues and Sources of Funds

PV Water is funded through:

- Management Fees collected on tax rolls
- Augmentation Charges collected on groundwater pumped from the Basin
- Delivered Water Charges for supplemental water delivered in the coastal zone through the Coastal Distribution System (CDS)
- Grants and Loans
- Interest and Other Revenues

Management Fees are collected on county tax rolls with residential parcel fees of \$18 per year and commercial parcel fees of \$20 per year. Management Fee revenues are placed in the General Fund category. This budget includes projected revenues of \$370,000 in Management Fees.

PV Water levies a groundwater augmentation charge "on the extraction of groundwater from wells within the Agency's boundaries in order to pay the costs of purchasing, capturing, storing, and distributing supplement water and paying for activities required to prepare and implement the Agencies groundwater management program."¹ The rates for FY24-25 are provided in Table 1, below. Augmentation charge revenue is placed in the Special Revenue Fund category. This budget includes projected revenues of \$12.2 million in augmentation charges.

PV Water administers a delivered water charge to customers who purchase supplemental water supplies.

¹ Ordinance 2021-02, An Ordinance of the Pajaro Valley Water Management Agency Adjusting Groundwater Augmentation Charges

Supplemental water is comprised of recycled water from the Watsonville Area Recycled Water Facility, Harkins Slough Managed Aquifer Recharge & Recovery Facility, blend water wells operated by the Agency, and the City of Watsonville’s potable supply. The delivered water charge rate is shown in Table 1 and is \$454 per acre-foot through November 30, 2024, and \$477 per acre-foot effective December 1, 2024². Revenue generated from the sale of delivered water is placed in the Special Revenue Fund category. The budget includes projected revenues of \$1.9 million in delivered water charges.

Table 1. Water Rates for Fiscal Year 2024-25

User Class	Cost of Service Rate Effective Dec. 1, 2023 (Per Acre-Foot)	Cost of Service Rate Effective Dec. 1, 2024 (Per Acre-Foot)
Augmentation Charges:		
Metered Users - Outside Delivered Water Zone	\$302	\$323
Metered Users - Inside Delivered Water Zone	\$420	\$452
Unmetered Users (Rural Residential)*	\$142	\$152
Delivered Water Charge	\$454	\$477

**Rural residents are billed for an estimated 0.5 af/year water use.*

PV Water actively seeks grants and low interest financing opportunities to support the planning and implementation of water supply projects and management actions. Grants and other financial agreements (such as the Clean Water State Revolving Fund, or SRF) that PV Water is able to secure reimburse eligible expenses incurred during the planning and implementation of those funded projects and programs. Reimbursements are placed in the fund category from which they were originally spent. The budget includes projected grant reimbursement revenues of \$4.5 million. The grants that will provide this revenue include the following:

- Department of Conservation (DoC) “Multibenefit Land Repurposing Grant”: Awarded in September 2023, the grant includes \$8.89 million in funding for PV Water (approximately \$3.5 million) and its partners the Resource Conservation District of Santa Cruz County, the University of California, Santa Cruz, the Santa Cruz County Land Trust, the Pajaro River Flood Management Agency, Watsonville Wetlands Watch, and the Nature Conservancy to implement projects within the Pajaro Valley. Staff anticipate receiving approximately \$2.1 million in FY24-25.
- DWR “Proposition 1, Round 2, Integrated Regional Water Management (IRWM) Implementation Grant”: Awarded to San Benito County Water District in February 2024, PV Water will receive \$1.8 million from this grant in total and anticipates receiving \$1.6 million in FY24-25.
- DWR “2021 Sustainable Groundwater Management (SGM) Grant Program Implementation Grant”: Awarded in June 2022 for \$7.6 million to fund College Lake Integrated Resources Management Project pre-construction activities. PV Water has received \$7.06 million to date and staff anticipate receiving approximately \$500 thousand in FY24-25.
- DWR “Watershed Resilience Pilot Program” Grant: Anticipated to be awarded in May 2024, provides \$2 million for watershed resilience activities. Staff anticipate receiving approximately \$300 thousand in FY24-25.

General Fund Agency Administration Service Expense Group Summary

The Agency Administration Service Expense Group includes activities related to the administration of the Agency that are paid from the General Revenue Fund. The Agency pays Board expenses, as well as expenses related to LAFCO, auditing services, and membership charges to professional organizations from the General Revenue Fund. The specific categories included within the Agency Administration Service are summarized below.

Office Administration

Major functions included in this category are auditing services, accounting services, legal services, strategic planning services, LAFCO fees, and memberships in professional organizations including but not limited to the Association of California Water Agencies (ACWA), the California Special Districts Association (CSDA), the California Public Information Officials (CAPIO), the Groundwater Resources Association (GRA), and WateReuse. Also included within Office Administration is maintenance associated with the Agency office buildings and properties.

Board Support

The Board Support portion of the budget provides funding for the Board of Directors and its Committees including elections, legal services, and agenda packet preparation, publication, and distribution. Funding for Directors to attend conferences and training is also included.

Special Projects Outreach

Special Projects Outreach typically funds targeted water awareness and education campaigns. Examples of prior projects include water conservation and drought awareness advertisements, especially in support of "Water Awareness Month." Staff have also worked with the Ag History Project at the Santa Cruz County Fairgrounds on water conservation displays and other educational materials.

Special Fund General Administration Service Expense Group Summary

The General Administration Service Expense Group includes activities associated with office and grant administration, conservation, outreach and education. A summary of each group follows.

Office Administration

The Office Administration category holds expenses that are general in nature, including billing and collection costs.

Grant & Loan Administration

Functions included in this category are grant and loan contract management and associated intergovernmental relations. The professional services in this category are often grant reimbursable, which represent consultant services for the administration and reimbursement of ongoing grants and loans.

Conservation

The conservation goal in the 2014 BMP Update accounts for 5,000 acre-feet per year (AFY) about a 10% reduction in pumping compared to the baseline 2006-2010 average for groundwater wells and is ~40% of the overall solution to eliminate 12,100 AFY of groundwater extraction. The Agricultural Water Conservation Program provides a high-level of engagement with local partners and stakeholders, to streamline ranch level conservation programs and leverage resources in order to optimize basin-wide progress toward the conservation goals. Partner agencies include the Resource Conservation Districts of Santa Cruz and Monterey Counties, the Natural Resources Conservation Service, and the UC Cooperative Extension. In March 2024, the Board of Directors voted in favor of funding the BMP Agricultural Water Conservation Program for the next three fiscal years (through FY26-27) at a rate of approximately \$450,000 per year, which includes \$350,000 per year for professional services, and up to \$100,000 per year in rebates, trials, and cost-sharing agreements. The Household Water Conservation program includes rebates, a home and garden water conservation tool kit, and water saving device give-a-ways.

Outreach & Education

Outreach, community engagement, and education are among the most important functions of PV Water. Meetings, tours and workshops for stakeholders, community members, and students make up an important component of PV Water's outreach program. Outreach outlets included in this category are annual reports, newsletters, participation in local fairs and events, website updates and maintenance, and development of traditional media and social media content (e.g. Facebook). The FY24-25 budget includes \$25,000 for professional services to support outreach activities.

Facility Operations Service Expense Group Summary

The Facility Operations Service Expense Group includes activities associated with the operation and maintenance of the Agency's supplemental water supply facilities. Specific categories included within the Facility Operations Service Expense Group are summarized below, along with anticipated activities for the year.

Harkins Slough Managed Aquifer Recharge & Recovery Facility

The facility has two parts: 1) the diversion facilities on Harkins Slough and conveyance infrastructure; and 2) recharge basin facilities, which are located on the San Andreas Terrace and include the recharge basin, monitoring wells, recovery wells, and the remote terminal units that house power, electronics, and other equipment. Operational costs include utilities, water quality sampling, maintenance, and professional support services for operational software and hardware, and electrical maintenance.

Coastal Distribution System (CDS)

Coastal Distribution System Facilities include over 21-miles of sub-surface supplemental water conveyance pipeline located in the coastal area extending from Elkhorn Slough to Sunset Beach, and inland to approximately Highway 1. The CDS is capable of providing supplemental water to approximately 6,100 irrigated acres. Operational costs include utilities, maintenance, professional services for software, lease expenses, water quality sampling, and electrical, meter and pipeline maintenance.

Supplemental Water (In-Basin)

Supplemental Water Facilities include three Blend Wells and the City of Watsonville's potable supply. Water System Operators blend supplemental water supplies with recycled water to both meet demand and improve water quality. Operational costs include utilities, leases, software, electrical and pump maintenance.

PV Water is also implementing the Recharge Net Metering Program, which has the goal of enhancing groundwater recharge within the Basin by 1,000 AFY through a series of stormwater collection and infiltration basins. PV Water issues rebates to landowners based on the measured volume of water infiltrated as reported by the program's "Third Party Certifiers." The intention of the rebate is to help offset costs incurred for the maintenance of the infiltration systems. Recharge Net Metering Program participants benefit directly through the rebate program; they also benefit indirectly (along with other groundwater users and the basin as a whole) because managed aquifer recharge helps to improve and sustain the quantity and quality of groundwater. PV Water's responsibilities in this program may increase with time to include items such as permitting, environmental compliance, etc.

Watsonville Area Recycled Water Facility (RWF)

The RWF was constructed and is operated and maintained in collaboration with the City of Watsonville (City). The RWF was designed to produce up to 4,000 acre-feet per year of tertiary-treated, Title 22 compliant recycled water for use as an irrigation supply, delivered through the CDS, in lieu of groundwater. Expenses in this category include annual fees, studies, and operations and maintenance (O&M) costs paid to the City for water produced at the RWF and include equipment, chemicals, staff time, etc. This year's budget includes \$3 million in O&M costs to the City for an anticipated 3,500 acre-feet (AF) of recycled water production.

College Lake Integrated Resources Management Project (College Lake Project)

This facility includes an intake pump station with fish passage facility, a raw water pipeline to a water treatment plant, and a 6-mile treated water pipeline to the CDS. The College Lake Project, while still under construction as of July 2024, will become operation prior to the close of the fiscal year. Costs to operate and maintain the facility for the first two years will be estimated based on engineer estimates and will be refined with time and experience. The facility is estimated to produce between 1,800 and 2,300 acre-feet per year of water.

Metering Program

The Metering Program consists of maintaining and reading over 1,000 flow meters basin-wide on a quarterly basis. Calibrated flow meters measure groundwater extractions and water deliveries for basin management and billing purposes. PV Water is in the process of upgrading traditional meters to telemetry meters that allow for cloud-based access of data for both staff and customers.

Basin Management Service Expense Group Summary

The Basin Management Service Expense Group programs inform and support water resources management within the basin and include hydrologic modeling, basin monitoring, planning on the local level and in collaboration with regional stakeholders/partners, and funding activities such as grants, loans, and rate setting efforts. A summary of each program follows.

Basin Modeling

PV Water collaborated with the United States Geological Survey (USGS) to develop the Pajaro Valley Hydrologic Model (PVHM), under the guidance of a Technical Advisory Committee, between 2005 and 2010. The PVHM is the primary tool used to provide water budget information to help inform water resource planning activities, and to simulate water management scenarios, such as climate change or project implementation, in support of basin management planning efforts. The budget provides funding for USGS support to continue updating and improving the PVHM. Ongoing work supports PV Water's SGMA compliance and is an integral component of future planning efforts.

Basin Monitoring

Monitoring hydrologic conditions of the Basin provides critical information to the Agency and the public to evaluate the progress toward achieving sustainable groundwater resources. Staff use data collected through monitoring programs to track and report changing conditions within the Basin that result from the implementation BMP projects and management actions, as well as climate and weather variability. Staff routinely monitor groundwater, surface water, supplemental water supply facilities, soils, land use, and weather. The data collected assists in tracking spatial and temporal changes to water quality, groundwater levels, streamflow, and soil quality. The programs also provide data to satisfy monitoring and reporting requirements of numerous environmental permits and annual reporting including: the Harkins Slough Water-Right Permit, the NPDES General Limited-Threat Discharge Permit, the Master Reclamation Permit, and SGMA annual reporting. Staff oversee the water quality aspects of the supplemental water facilities; maintain field instrumentation; review well permit applications, and document Basin conditions as needed to meet the requirements of over \$80 million in water resources construction grants awarded to the Agency.

Programs include:

- Groundwater monitoring of over 170 wells semi-annually basis, and monthly water level monitoring of a subset of those wells.
- Seawater intrusion monitoring of wells located in and near the intruded zone.
- Surface water quality monitoring at approximately 40 sites.
- Hydrologic studies in the College Lake and Watsonville Slough System Watersheds.
- Operation and maintenance of over 100 data-loggers at surface water and groundwater monitoring locations collecting data as frequently as every 15 minutes.
- Annual land use surveys detailing land use and crop types basin-wide.

In-Basin Management

The In-Basin Management section of the budget has historically funded the development of the Basin Management Plan (BMP). The Board of Directors certified the BMP Update Environmental Impact Report (Resolution 2014-04) and approved the BMP Update (Resolution 2014-05) in April 2014. In 2016, PV Water developed a BMP Implementation Plan Strategy. In July 2019, DWR approved PV Water's Groundwater Sustainability Plan (GSP) Alternative. Following a year-long process led by the Ad Hoc Sustainable Groundwater Planning Advisory Committee, the Board adopted Resolution 2021-17, "Adopting the Basin Management Plan: Groundwater Sustainability Update 2022 and Authorizing the General Manager or Designee to Submit the Basin Management Plan: Groundwater Sustainability Update 2022 to the California Department of Water Resources". Included in the FY24-25 budget is \$750 thousand in funding to develop of a Department of Conservation grant funded Multibenefit Land Repurposing Plan, as well as to conduct data analysis, prepare and present the SGMA annual report, and respond to comments on the GSU22.

Regional Water Management

PV Water, in partnership with San Benito County Water District (SBCWD) and Santa Clara Valley Water District (Valley Water), compose the Regional Water Management Group (RWMG) and lead the Integrated Regional Water Management (IRWM) efforts for the Pajaro River Watershed. The RWMG most recently updated and adopted the IRWM Plan in October 2019. In April 2020, the PV Water Board adopted Resolution 2020-03, adopting the 2019 Pajaro River Watershed Integrated Regional Water Management Plan. DWR approved the plan in April 2020. Work this fiscal year will include coordination meetings with SBCWD and Valley Water, potential pursuit of regional grant funding with the partners, and water resource planning as needed to maintain compliance with updated IRWM requirements. New this fiscal year is funding in the budget for the DWR Watershed Resilience Pilot Grant, which includes \$2 million in funding through June 30, 2026. \$1 million is included in the FY24-25 budget to support this grant program.

Out-of-Basin Funding

Out-of-Basin Funding efforts include the continued pursuit of state and federal grants and loans. For instance, PV Water acquired approximately \$74.2 million in WIFIA loans in February 2024 to provide partial funding for the College Lake and WSS-MARR Projects. Various federal and state programs continue to represent significant funding opportunities. Over the course of the fiscal year, PV Water expects to receive approximately \$4.5 million in grant reimbursements as described above. The budget includes funding for grant writing.

In-Basin Funding

In June 2019, the Board approved an agreement to develop an updated Cost of Service Rate Study (Rate Study) to evaluate anticipated revenue needs to cover expenditures associated with the continued implementation of the 2014 BMP Update. The Board established an Ad Hoc Funding Committee in November 2019 to receive information developed as part of the Rate Study, evaluate potential options to meet revenue requirements, and make recommendations to the Board of Directors. The Committee voted in favor of recommending the rate structure, as proposed during its January 2021 meeting, to the Board. The Board adopted the Rate Study in February 2021. The Rate Study identifies water user categories and anticipated use amounts for each category. It also identifies costs of service, allocates the costs to the water users, and proposes a rate increase. The Board adopted Ordinances 2021-01 and 2021-02, adjusting the Agency's Delivered Water Charge and Groundwater Augmentation Charge in April 2021, and 2022-01, adjusting effective date to December 1 of each year. Staff anticipate the next rate setting effort will begin via Board action to form a new ad hoc rate setting committee after July 1, 2025.

Capital Projects Service Expense Group Summary

Following years of community engagement and work, the Board of Directors certified the 2014 BMP Update Environmental Impact Report (Resolution 2014-04), approved the 2014 Basin Management Plan Update (Resolution 2014-05) in 2014 and then adopted Ordinances 2015-01, 2015-02, 2021-01, and 2021-02 adjusting PV Water's rate structures to advance the implementation of the 2014 BMP Update. The projects and management actions described in the 2014 BMP Update are projected to achieve sustainable groundwater resources within the Basin by eliminating groundwater overdraft and reducing the rate seawater intrusion. Work to implement the capital projects is summarized below.

College Lake Integrated Resources Management Project

In October 2019, the Board adopted Resolution 2019-18, Certifying the Final Environmental Impact Report, Adopting Findings Pursuant to the California Environmental Quality Act, Adopting a Statement of Overriding Considerations, and Adopting a Mitigation Monitoring and Reporting Program for the College Lake Integrated Resources Management Project and Resolution 2019-19, Selecting, Approving, and Adopting the College Lake Integrated Resources Management Project. In August 2020, the Board approved agreements for design and bid period services, and in October 2020, the Board approved agreements for environmental & permitting support, property rights, and fish passage design services. In December 2021, the State Water Resources Control Board approved the water-right permit A032881 for the Project, providing PV Water the ability to appropriate up to 3,000 AF of water from Salsipuedes Creek per year. In January 2022, following a year-long, community-based Ad Hoc Adaptive Management Plan Committee effort, the Board adopted Resolution 2022-03, Adopting the College Lake Integrated Resources Management Project Adaptive Management Plan 2022, Fulfilling Environmental Impact Report Mitigation Measures, and Directing the General Manager, or Designee, to Implement the Adaptive Management Plan (AMP). In February 2023, the Board adopted Resolution 2023-02, Awarding Contract to Mountain Cascade Inc. for Construction of the College Lake Water Treatment Plant & Intake Facilities Project, Project No. 30-39-501, and the College Lake Pipeline Project, Project No. 30-39-502. The FY24-25 budget includes the funding anticipated to be necessary to complete the construction of the project.

Watsonville Slough System Managed Aquifer Recharge & Recovery Projects

In January 2021, the Board adopted Resolution 2021-03, Certifying the Final Environmental Impact Report, Adopting Findings Pursuant to the California Environmental Quality Act, Adopting a Statement of Overriding Considerations, and Adopting a Mitigation Monitoring and Reporting Program for the Watsonville Slough System Managed Aquifer Recharge and Recovery Projects. The Board also adopted Resolution 2021-04 Selecting, Approving, and Adopting the Watsonville Slough System Managed Aquifer Recharge and Recovery Projects. The budget includes funding to continue with implementation of the project, including design, permitting, and legal support, in addition to funding for the procurement of property rights.

Basin Monitoring Network Improvements Project

The purpose of this project is to help PV Water better quantify progress toward achieving sustainable groundwater resources through the installation of additional groundwater monitoring wells within the Basin. Staff have initiated the application process with DWR for *Technical Support Services* in support of the installation of new monitoring wells to fill data gaps (as described in GSU22) and to improve the PV Water's ability to monitor the effectiveness of projects and management actions. The Cost of Service Rate Study, approved by the Board in 2021, anticipated a \$1.5 million expenditure to construct new monitoring wells.

Debt Service Payments Service Expense Group Summary

The Debt Service Payments Expense Group includes costs associated with payment of long-term balances as summarized below.

Note Payable – Department of Water Resources (DWR)

The Agency entered into a promissory note on June 15, 2005, with the DWR in the amount of \$3,511,446. The loan proceeds were used for the construction of projects identified in the Revised BMP (2002). Principal and interest for FY24-25 amounts to \$251,416, with interest at 2.4%. The final payment on this note is due September 30, 2027.

Bond Payable – 2015 Water Revenue Refunding Bonds

The Agency issued Water Revenue Refunding Bonds in the amount of \$19,970,000 in 2015 primarily to refinance 1999 Certificate of Participation and two State Water Resources Control Board loans used to construct Harkins Slough Managed Aquifer Recharge and Recovery Facilities, the Coastal Distribution System, and Blend Wells. Principal and interest for FY24-25 amounts to \$1,138,350, with interest ranging from 3% to 5%. The final payment on this bond is due March 1, 2029.

Bond Payable – 2016 Water Revenue Refunding Bonds

The Agency issued Water Revenue Refunding Bonds in the amount of \$11,435,000 in 2016 to refinance the City of Watsonville's 2007 Water Revenue Bonds for costs associated with the design and construction of the Recycled Water Facility. Principal and interest for FY24-25 amount to \$805,713, with interest ranging from 3% to 5%. The final payment on this bond is due March 1, 2036.

Clean Water State Revolving Fund (SRF) – State Water Resources Control Board (SWRCB)

The Agency was awarded grant and loan funding from the California State Water Resources Control Board's Clean Water SRF "Water Recycling Construction Financing" program in February 2016. The loan amount is \$1,978,522 at an interest rate of 1% for 30-years. The projects funded by this agreement are the Recycled Water Storage and Distribution Pump Station Improvements Project, and the Recycled Water Facility Disk Filter Upgrade Project. Principal and interest for FY24-25 amount to \$76,206. The final payment on this loan is due July 1, 2050.

2023 Water Revenue Certificates of Participation

The Agency issued a debt obligation in the form of Certificates of Participation to raise \$40,390,000 million for the College Lake Project in June 2023 with interest ranging from 4% to 5%. Interest for FY24-25 amounts to \$1,746,375. The final payment on this bond is due March 1, 2053.

Water Infrastructure Finance and Innovation Act (WIFIA) program – United States Environmental Protection Agency (EPA)

The Agency issued a debt obligation with the EPA in the form of two WIFIA loans in February 2024 for approximately \$74.2 million.

- The 2024 Water Revenue Certificate of Participation, Series A loan partially funds the College Lake Project and is for \$43,109,270 at an interest rate of 4.47%. The first payments for this loan are due during FY26-27, when \$1,052,559.37 is due by September 1, 2026, and March 1, 2027. The final maturity of the Series A loan is March 1, 2060.
- The 2024 Water Revenue Certificate of Participation, Series B loan partially funds the Watsonville Slough System Managed Aquifer Recharge and Recovery Project and is for \$31,099,063 at an interest rate of 4.46%. The first payment for this loan is due during FY28-29, when \$946,636.45 is due by March 1, 2029. The final maturity of the Series B loan is March 1, 2063.

Table 14. Debt Service Summary

Debt Service July 1, 2024 to June 30, 2025	
Expenditures	
DWR Note Payable Principal	232,698
DWR Note Interest	18,718
SWRCB Loan Principal	58,835
SWRCB Loan Interest	17,371
2015 Bond Payment Principal	945,000
2015 Bond Payment Interest	193,350
2016 Bond Payment Principal	515,000
2016 Bond Payment Interest	290,713
2023 COPs (Interest only)	1,746,375
WIFIA Series A (College Lake)	
WIFIA Series B (WS-MARR)	-
Total Expenditures	\$ 4,018,059
