Achieving a Sustainable Groundwater Basin

PV Water
FACT SHEET

For the Beneficial Users of the Pajaro Valley Basin through The Basin Management Plan - Groundwater Sustainability Update 2022 Process

Ensuring Sustainability for the Pajaro Valley Basin: **A Central Coast Jewel**

From the redwoods to the sea, the Pajaro Valley is home to approximately 95,000 residents, a billion-dollar agriculture industry that feeds our communities, a rich coastal ecosystem, and more.

The Pajaro Valley Groundwater Basin is a critically overdrafted, high priority basin as defined by the California Department of Water Resources (DWR). The Pajaro Valley Basin is located at the end of the Pajaro River Watershed which drains approximately 1,300 square miles of Monterey, Santa Cruz, Santa Clara, and San Benito Counties. The Pajaro Valley Basin is bordered by the Monterey Bay to the west and the San Andreas Fault to the east. It is adjacent to the Santa Cruz Mid-County Basin and Purisima Highlands Subbasin to the northwest, and the Salinas Valley 180/400-Foot Aquifer and Langley Area Subbasins to the south.

Groundwater Sustainability Update 2022: A Collaborative Process

Groundwater is vital to the Pajaro Valley and neighboring communities for life, the economy, and the environment. Groundwater provides more than 90 percent of the total water supply for the Pajaro Valley during an average year. Groundwater is the source of most drinking water for municipal and rural residents, and it is utilized for agricultural and commercial purposes.

Achieving a sustainable groundwater basin is Pajaro Valley Water Management Agency's (PV Water) primary goal. To achieve this goal, PV Water is partnering with local and regional stakeholders to develop the **Basin Management Plan: Groundwater Sustainability Update 2022**. This process, known as **GSU22**, is a continuation of PV Water's Basin Management Plan Update (BMP, 2014) that was submitted to DWR in 2016 as an Alternative to a Groundwater Sustainability Plan (GSP) for the Pajaro Valley Basin. DWR approved PV Water's Alternative in 2019, and the Sustainable Groundwater Management Act (SGMA) requires that approved Alternatives be updated every five years. PV Water's first five-year update is the **GSU22**. PV Water is receiving $500,000 in Proposition 68, Sustainable Groundwater Management Grant funds from DWR to support the development of **GSU22**.

GSU22 & SGMA

California lawmakers adopted SGMA in 2014. The law seeks to bring the state's medium and high priority groundwater basins into a sustainable condition. SGMA requires that high priority, critically overdrafted basins such as Pajaro Valley achieve sustainability by 2040. SGMA identifies sustainability indicators to be used to assess basin sustainability. The **GSU22** effort includes analyses for the four sustainability indicators as recommended by DWR.

Sustainability Indicators to be Addressed with GSU22

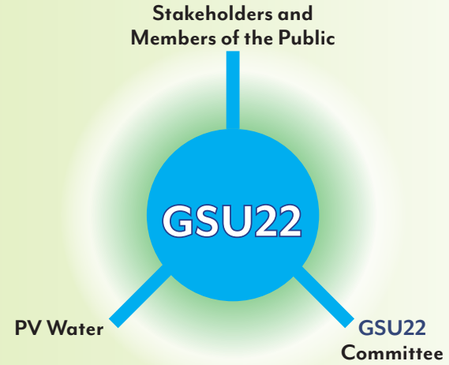
Lowering Groundwater Levels | **Seawater Intrusion** | **Land Subsidence** | **Surface Water Depletion**

An adopted update is due to DWR by January 1, 2022

As part of its staff report approving PV Water's Alternative, DWR provided recommendations for the first five-year update. In addition to responding to DWR's recommendations, the **GSU22** will summarize the State of the Basin, assess the progress of Management Actions and Projects, and evaluate progress toward achieving sustainability goals.

The Collaborative **GSU22** process will be accomplished through broad stakeholder participation. The participating stakeholder groups include:

- PV Water (Board and Staff)
- **GSU22** Ad Hoc Sustainable Groundwater Planning Advisory Committee (**GSU22** Committee)
- Beneficial Users
- Public



PV Water, as the sole Groundwater Sustainability Agency, is responsible for achieving sustainable groundwater resources for the Pajaro Valley Basin. The PV Water Board of Directors voted to create the Ad Hoc Sustainable Groundwater Planning Advisory Committee (**GSU22** Committee) to guide development of the **GSU22** as described in the **GSU22** Communication and Engagement Plan. The **GSU22** Committee, with stakeholder input, will submit a recommended **GSU22** Plan to the PV Board for consideration of approval by December 2021.

What will the GSU22 process accomplish?

1. A strengthened Plan and Framework (**GSU22**) to achieve a sustainable Pajaro Valley Groundwater Basin for beneficial users now and for generations to come

2. Evaluation of whether BMP projects and management actions will achieve sustainability as defined by **GSU22** consistent with SGMA

3. Development of monitoring plans to assess groundwater sustainability and improve knowledge of the Pajaro Valley Basin for enduring solutions

GSU22 Schedule

Oct 20	Nov 20	Dec 20	Jan 21	Feb 21	Mar 21	Apr 21	May 21	Jun 21	Jul / Aug 21	Oct / Nov 21	Dec 21
Admin	General	Seawater Intrusion	Surface Water Depletion	Lowering GW Levels	Surface Water Depletion	Seawater Intrusion	Surface Water Depletion	Management Actions	General	Board Meeting	Admin
General	Intro to Sustainability Criteria	Land Subsidence	Groundwater Dependent Ecosystems	Seawater Intrusion	General	Management Actions	General	Monitoring Plans	Management Actions		Submit GSU22 to DWR
	Lowering GW Levels				Board Meeting			Board Meeting	Monitoring Plans		
Stakeholders' Input											

Join *PV Water* in achieving sustainability!

- Participate in our GSU22 Committee meetings to develop our groundwater sustainability approach.
- Follow us on the PV Water Facebook page.
- To register or for more information, please contact Marcus Mendiola at mendiola@pvwater.org.
